Our Commitment to Community Health

Penn State Health is committed to understanding and addressing the health needs of the communities it serves and promoting sustainable and collaborative action. To best do that, the health system partnered with community organizations and members to complete its fourth Community Health Needs Assessment (CHNA) and develop a plan to address the prioritized needs identified.

For this fourth assessment cycle, Penn State Health formed a collective workgroup that included Penn State Health Milton S. Hershey Medical Center, Penn State Health Holy Spirit Medical Center, Penn State Health St. Joseph Medical Center, Penn State Health Hampden Medical Center, Pennsylvania Psychiatric Institute, Penn State Health Rehabilitation Hospital and key community stakeholders to identify and address the needs of residents living in Berks, Cumberland, Dauphin, Lancaster, Lebanon and Perry counties. The Lancaster community was included because Penn State Health Lancaster Medical Center was under construction during this assessment. The Department of Public Health Sciences at Penn State College of Medicine coordinated the CHNA efforts. By taking a systemwide approach to data collection and community health planning, Penn State Health will leverage system assets across the service area to address prioritized health needs.

The following pages describe the Implementation Plan developed to address these prioritized health needs. We thank all our community partners and employees who joined us to develop this plan to improve health across the region and reduce health disparities. We look forward to further collaborating and partnering over the next three years to strengthen our community together.

Thank you,

Overview

Community Description

The service area defined for purposes of the CHNA encompasses 225 ZIP codes in six Pennsylvania counties: Berks, Cumberland, Dauphin, Lancaster, Lebanon and Perry. These six focus counties represent the community where health care resources are available and provided by the partnering Penn State Health organizations. The counties are also home to the majority of Penn State Health’s patient population.
Three Priority Areas

The 2021 CHNA gathered community input and compared health trends and disparities across the six-county service area. Specific CHNA steps included a kickoff meeting, monthly hospital leadership meetings, a key informant survey completed by community leaders, a community member survey, a review of other public health data sources already gathered for our service area, a review of our former implementation plan outcomes and resources, and two community partner forums and a steering committee meeting to gather additional feedback and prioritize community health needs. The entire process engaged over 3,000 individuals. Based on this work, our hospitals, in collaboration with our community partners, will focus systemwide health improvement efforts over the next three-year cycle on the identified priority areas of 1) Mental Health 2) Health Equity and 3) Wellness and Disease Prevention.

Mental Health includes a focus on community groups, such as the LGBTQ+ community, people of color and youth. Substance use disorder will also be addressed under this priority. Health Equity covers concerns that include access to care, elder issues with access, social determinants of health, racism, diversity, transportation and housing. Wellness and Disease Prevention encompasses food access and nutrition, substance use prevention, chronic disease prevention, health education and physical activity. These priorities are interrelated, and one cannot be addressed without the other.

Implementation Plan

To develop our Implementation Plan, internal employees and community partners attended a kickoff meeting, where CHNA findings and partner forum recommendations were shared. Participants organized into the following task forces to best develop our plan: 1) Mental Health; 2) Health Equity; 3) Chronic Disease and Risk Factor Prevention; 4) Nutrition and Food Access; and 5) Physical Activity. These task forces met from November 2021 to February 2022 to discuss key findings from the CHNA; explore underserved communities through review of Community Need Index (CNI) scores, life expectancy measures and other key social determinants of health; find additional community partner resources; and develop a plan. The plan includes key program descriptions, goals and objectives to be met over the next three years.
Due to the overlapping nature of our priorities, all five task forces have proposed similar programs to expand communication and promote existing resources. All have agreed to continue to meet and engage new partners over the three years of this plan to encourage dialogue among themselves and continue to streamline and strengthen each other’s community efforts. Additionally, each task force plans to compile an inventory of community resources that are currently available to not only increase awareness among the group but also to advertise to community members. Not knowing what resources are available and how to access them was a clear message heard during our CHNA process. Through key partnerships with organizations listed at the end of this document, the plan is to make these resources more well known — through PA 211, for example, a free and confidential service that helps people find the local resources they need 24/7.

Our projects focus heavily on community education, another message we heard through our CHNA process. In addition, many of our projects will serve more than one of our identified community needs. For example, increasing our outreach and programming to more food pantries across our service area furthers our work in the areas of Health Equity, Wellness and Disease Prevention and Nutrition and Food Access. Within each priority area, we will be focusing our efforts on communities identified with the highest need. These might be areas with larger minority populations, lower life expectancy and other high-risk groups.

Penn State Health has completed five cycles of community health needs assessments and has established a long legacy of community health programming. Many programs identified in our current plan will carry forward into the new plan and be further developed and enhanced. For example:

- Pennsylvania Psychiatric Institute will continue Mental Health Signs and Symptoms training.
- NARCAN distribution and education, as well as a comprehensive drug safety program, including education, drug take-back days and boxes, lock boxes and DisposeRx drug disposal packet distribution will continue.
- The Berks County Veggie Rx program has been so successful, it will be expanded into Lebanon County.
- The Pantries and Wellness Support (PaWS) program started at the Milton S. Hershey Medical Center will expand cardiovascular screenings and health education into additional food pantries across our community in all six counties.
- The Penn State Health Holy Spirit Medical Center Medical Outreach Clinic will bring free health services to community members in the Allison Hill neighborhood of Harrisburg, Pa.
- Penn State Health Rehabilitation Hospital will plan its extremely popular Rec Fest event to introduce adaptive recreational activities.
- The Hershey Medical Center bike share program will continue to expand into our community, and the adult and pediatric trauma and injury prevention outreach program will address auto, bike and pedestrian safety.
- Disease-specific support groups, health screenings and outreach and navigation programs will continue to be a focus of all hospitals to aid and educate our communities.
- Our dental clinics and residency training programs will serve community members who need this important care to support their overall good health.
• We will continue annual flu shot events in underserved community locations, ensuring these important vaccines can be received by everyone.
• We will continue to adapt our programming as needed to respond to COVID-19.

All hospitals will partner with the following Penn State College of Medicine experts:

• Penn State Addiction Center for Translation
• Penn State Center for the Protection of Children
• Penn State REACH (Racial and Ethnic Approaches to Community Health) program
• Penn State PRO Wellness
• Penn State Project ECHO (Extension for Community Healthcare Outcomes)
• Band Together, strength training program
• Penn State Cancer Institute
• Medical student programs, including the Health Systems Science Patient Navigation and Culinary Medicine courses and the Student-run and Collaborative Outreach Program for Health Equity (SCOPE).
• Penn State Health Office for Diversity, Equity and Inclusion pipeline programs
• Penn State College of Medicine Department of Public Health Sciences
• Community Health Equity & Engagement in Research (CHEER) program
• Penn State College of Nursing

More internal Penn State and Penn State Health projects will be identified to partner with over the course of this plan.

The following pages show the actions that will address our prioritized health needs over the next three years, as well as the specific hospital addressing each need. Pennsylvania Psychiatric Institute in partnership with Penn State Health will focus their expertise on the Mental Health and Health Equity priorities. The Wellness and Disease Prevention priority will be addressed by Penn State Health hospitals.

The information is organized by priority and subcategories, and includes:

• Description of the health concerns found through the CHNA process
• The responsible hospitals
• Initiatives the hospitals intend to implement
• Anticipated health impact of these strategies based on achieving set goals, indicators and objectives
• Projected resources
• Potential community partners related to the plan

Strategies included are evidence-based, or strategies that will be evaluated, to ensure the most effective use of community and hospital resources. All outcomes will be tracked and any necessary adjustments to this plan will be shared in annual reports that will be communicated publicly on our websites.
Priority #1: Mental Health

According to the 2021 County Health Rankings, within the six-county service area, the average number of mentally and physically unhealthy days reported in the past 30 days has continued to increase, with more mentally unhealthy days being reported than physically unhealthy days. Fifty-seven percent of adults who responded to our community member survey had at least one poor mental health day in the past month (up from 54% in the 2018 survey), and 1 in 10 individuals reported 15 or more days of poor mental health. Among the LGBTQ+ population, 63% said depression was a top-three health concern, according to the 2020 LGBTQ Health Needs Assessment.

Eighteen percent of community members who responded to our survey needed and received mental health services. However, 1 in 11 individuals needed, but did not receive, mental health services. Furthermore, according to the 2019 Pennsylvania Youth Survey, 40% of children in the service area reported feeling sad or depressed most days in the past year, and 1 in 6 reported considering suicide one or more times in the past year.

“I think that our largest community health issue, which is of epidemic proportions, is childhood trauma/adverse childhood experiences.” - Community Member Survey comment

“For mental health and substance use disorder, there are services available, but not always enough.” - Key Informant Survey comment

Goal

Improve mental health through prevention, intervention and support.

Overarching Indicators/Measurements for Success

- Reduce the number of poor mental health days reported by adults in the past 30 days.
- Decrease the percentage of children reporting feeling sad or depressed most days in the past year.
- Decrease the number of drug overdose deaths per 100,000 population.
### Behavioral Health Education and Prevention

Offer and increase/expand behavioral health training and education, such as Mental Health Signs and Symptoms, Crisis Intervention Team (CIT) and substance use and harm reduction trainings, especially to students, families, people of color, those who identify as LGBTQ+ and the general community. Expand the drug safety program, which includes storage of medications and safe disposal at home, drop boxes on the Hershey Medical Center campus and drug take-back days.

**Responsible Party:** Pennsylvania Psychiatric Institute, Penn State Health Milton S. Hershey Medical Center, Penn State Health Holy Spirit Medical Center, Penn State Health St. Joseph Medical Center and Penn State Health Hampden Medical Center

<table>

<th>Program Goal</th>
<th>Short-Term Objectives (Year 1)</th>
<th>Medium-Term Objectives (Year 2)</th>
<th>Long-Term Objectives (Year 3)</th>
</tr>
</thead>
</table>
| Expand and increase behavioral health training and education. | 1. Offer Mental Health Signs/Symptoms trainings.  
• 5 to teachers  
• 3 to law enforcement  
• 2 to community health workers (CHWs)  
• Collaborate with the Dauphin County District Attorney’s Office to offer 3 CIT trainings. | 1. Offer Mental Health Signs/Symptoms trainings.  
• Use train-the-trainer to educate 3 CHWs on offering Mental Health Signs/Symptoms training.  
• Offer 3 Mental Health Signs/Symptoms trainings to students in grades 7 and higher. | 1. Offer Mental Health Signs/Symptoms trainings.  
• By the end of the 3rd year, over 800 individuals will have received Mental Health Signs/Symptoms training. |
| | 2. Provide substance use education via 15 lectures, trainings, webinars or health fairs. | 2. Expand substance use education via lectures, trainings, webinars or health fairs in 2 additional counties and within the Bureau of Prisons. | 2. Provide substance use education via 15 lectures, trainings, webinars or health fairs among 2 additional populations (LGBTQ+, religious, people of color, etc.). |
| | 3. Distribute naloxone, lock boxes and safe disposal pouches at 2 health fairs in our service area. | 3. Distribute naloxone, lock boxes and safe disposal pouches at 2 additional health fairs in our service area. | 3. Distribute naloxone, lock boxes and safe disposal pouches at 2 additional health fairs in our service area. |
## Behavioral Health Resources, Support and Collaboration

Join or develop a collaborative workgroup to share and promote behavioral health resources and availability. Seek grants to fund development and maintenance of a behavioral health resource database, while promoting current resources such as 988, PA 211 and the 741741 crisis text line, especially within local school districts. Provide increased substance use intervention and treatment via a SMART Recovery support group and the availability of additional addiction medicine fellows and physicians within the Advancement in Recovery (AIR) program and addiction medicine fellowship.

**Responsible Party:** Pennsylvania Psychiatric Institute (PPI), Penn State Health Milton S. Hershey Medical Center, Penn State Health Holy Spirit Medical Center, Penn State Health St. Joseph Medical Center and Penn State Health Hampden Medical Center.

<table>
<thead>
<tr>
<th>Program Goal</th>
<th>Short-Term Objectives (Year 1)</th>
<th>Medium-Term Objectives (Year 2)</th>
<th>Long-Term Objectives (Year 3)</th>
</tr>
</thead>
</table>
| Collaborate with other organizations to develop an inventory of behavioral health resources and support systems. | 1. Develop Opportunities to Collaborate  
  • Join a collaborative already in place, such as the HEAL PA initiative.  
  • Apply for PSH Community Relations and Association for Faculty and Friends grants.*  
  • Gather and create an inventory of mental health and substance use resources. | 1. Maintain and expand the inventory of mental health and substance use resources. | 1. Maintain and expand the inventory of mental health and substance use resources. |
| Build relationships with 3 superintendents to discuss mental health resource promotion. | 2. Collaborate with 3 school districts to add PA 211 and 741741 as resources in students’ agenda books. | 2. Continue collaborating with school districts to promote mental health resources. |  |
| Collaborate with PA 211 to increase awareness of mental health resources.  
  • Obtain baseline statistics on PA 211 mental health resource usage. | 3. Determine increase in PA 211 mental health resource use during Year 1 and increase by 10%. | 3. Meet or exceed target of 10% increase in use of PA 211 mental health resources. |  |
| PSH Government Relations will meet with PSH leadership to review and assess mental health priorities and needs for the next 2 years. | 4. PSH Government Relations will work on addressing the mental health priority areas identified in Year 1. | 4. PSH Government Relations will continue to work on addressing the mental health priority areas identified in Years 1 and 2. |  |
| Recruit additional providers.  
  • Recruit 5 physicians focused on addiction to the AIR program.  
  • Recruit 2 fellows to the addiction medicine fellowship and obtain a baseline number of patients seen in clinics at PPI. | 5. Increase the number of patients receiving methadone or buprenorphine treatment at PPI clinics by 45%. | 5. Maintain the number of patients receiving methadone or buprenorphine treatment at PPI clinics. |  |
| Initiate 1 SMART Recovery support group. | 6. Initiate 1 SMART Recovery Friends and Family support group. | 6. Continue to offer 2 SMART Recovery support groups. |  |

* PSH = Penn State Health
Priority #2: Health Equity

Social determinants of health impact nearly 80% of health outcomes. These often result in gaps in care, which means that some groups of vulnerable populations are receiving less health care than others. According to the United Way’s 2020 Asset Limited, Income Constrained, Employed (ALICE) report, 27% of households in the service area earn above the poverty level but below the cost of living. One community member stated, “Many of the supports offered regarding food or health care are aimed at those who are eligible for free government programs, but there are many of us who are in the ‘working poor’ category who qualify for nothing.” When asked about inequity in health care, one community leader mentioned, “Most people are forced to travel outside of an hour to get to doctors who accept Medicaid or Medicare.” However, many individuals don’t seek care at all due to a lack of transportation. The top four reasons why community leaders believe people who have health insurance do not receive care are: inability to afford care, challenges of navigating the health care system, lack of transportation and feeling healthy and thinking they don’t need preventive health care. Community members identified social determinants of health, racism, LGBTQ+ discrimination, lack of diversity in health care and housing as additional causes of inequitable care.

Goals

• Bridge systemic gaps in care by expanding community access and navigation points in collaboration with community partners.

• Expand language and practices that are sensitive to issues like social determinants of health, racism and LGBTQ+ discrimination by promoting trauma-informed care (TIC).

Overarching Indicators/Measurements for Success

• Reduce disparities in life expectancy within our service area.

• Increase the percentage of adults with a routine checkup in the past year.

• Decrease the average scores of the Community Need Index, Social Vulnerability Index or Area Deprivation Index.
Ensuring that individuals across our service area can access quality health care regardless of circumstance is integral to the Penn State Health mission. The focus of this plan is to identify key partnerships with organizations that are trusted by their communities. These organizations serve as health care access and navigation points to underserved members of our service area through outreach locations and events that provide free or low-cost health care and education. Examples of these include food pantries, health fairs, community centers or any opportunity that can connect a community member to health services or aid in navigating the health care system. Through these connections, we will be better able to target health outreach to communities who need it most.

**Responsible Party:** Penn State Health Milton S. Hershey Medical Center, Penn State Health Holy Spirit Medical Center, Penn State Health St. Joseph Medical Center, Penn State Health Hampden Medical Center, Pennsylvania Psychiatric Institute and Penn State Health Rehabilitation Hospital.

### Trauma Informed Communities

Penn State Health and its partnering organizations are committed to a TIC model. This is a healing-centered approach that assumes an individual is more likely than not to have a history of trauma. Trauma can include violence, crime, poverty, racism, LGBTQ+ discrimination and the effects of COVID-19. Changes in communities and health care settings can be made to emphasize respecting and appropriately responding to the effects of trauma at all levels. The University of Buffalo and the United Way describe TIC as a shift from asking, “What is wrong with this person?” to “What has happened to this person and how do we help?” We will assess language used in communities and community organizations to examine stories around trauma, care and health. This will help us to determine how Penn State Health and its partners can make adjustments.

**Responsible Party:** Penn State Health Milton S. Hershey Medical Center, Penn State Health Holy Spirit Medical Center, Penn State Health St. Joseph Medical Center, Penn State Health Hampden Medical Center, Pennsylvania Psychiatric Institute and Penn State Health Rehabilitation Hospital

| Expand trauma-informed and healing-centered practices across the service area.| 1. Collaborate to create and maintain an inventory of community organizations already promoting trauma-informed practices. | 1. Increase PSH involvement in statewide trauma-informed care work by:  
• Serving on three task forces  
• Expanding occupational therapy education on sensory needs of children to 2 counties | 1. Begin to educate at the state level on how to implement trauma-informed processes. |
|                                                                              | 2. Partner with community organizations to identify existing TIC training options for PSH staff. | 2. In partnership with community organizations, offer 2 TIC trainings to PSH staff that are also open to the community to participate. | 2. In partnership with community organizations, offer 2 TIC trainings to PSH staff that are also open to the community to participate. |
Projected Resources

Pennsylvania Psychiatric Institute is committed to understanding how and why behavioral health illnesses develop and can best be treated. During FY 2021, PPI served a total of 45,392 patients: 3,322 children (ages 4 to 12), 8,328 adolescents (ages 13 to 18), 29,312 adults (ages 19 to 64) and 4,430 mature adults (ages 65 and older). Our patients came from 51 counties in Pennsylvania. More than $159,861 in charitable care was provided to patients who did not have insurance or were unable to pay. Pennsylvania Psychiatric Institute staff are a professional resource for community organizations and are frequently asked to provide trainings and seminars. During FY 2021, staff provided 80 hours to train 220 individuals. To date, this training has helped 1,011 community professionals and volunteers recognize the symptoms of mental health issues and provide appropriate first aid support and referrals for care. Over the next three years, Pennsylvania Psychiatric Institute will continue its commitment to serving the community through continued and improved access to services, voluntary programs and ongoing education.

Additional Information and Feedback

We thank our community partners and employees for their invaluable contributions to the CHNA and this Implementation Plan, which was developed to foster collaboration and improve the health of all residents in the region. For additional information about the CHNA, Implementation Plan and opportunities to partner, please contact us at CHNA@pennstatehealth.psu.edu.
